Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

09/777,925

Applicant(s)

KIM ET AL.

Examiner

Frank Duong

Art Unit

2666

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment.. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 25 January 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-32 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,2,11-13 and 22-32 is/are rejected.
- 7) ☒ Claim(s) 3-10 and 14-21 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 25 January 2005 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 7/23/01 and 1/25/05
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

### **DETAILED ACTION**

1. This Office Action is a response to communications dated 03/07/05. Amended claims 1-23 and newly added claims 24-32 are pending in the application.

#### ***Information Disclosure Statement***

2. The information disclosure statement filed 7/23/01 and refilled 1/25/05 complies with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609. It has been considered and placed in the application file.

#### ***Drawings***

3. The drawings filed 01/25/05 are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "congestion detector", recited in claim 12; "normal operation detector", recited in claim 14; "a monitor module configured to monitor ... virtual private network path", recited in claims 24-28 and "a monitor module configured to monitor ... virtual private network path", must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure

Art Unit: 2666

is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

4. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: "a monitor module configured to monitor ... virtual private network path", recited in claims 24-28 and "a monitor module configured to monitor ... virtual private network path", recited in claims 29-32.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 2666

5. Claims 24-32 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is no support for the claimed features of "a monitor module configured to monitor ... virtual private network path", recited in claims 24-28 and "a monitor module configured to monitor ... virtual private network path", recited in claims 29-32 in the original specification structurally and functionally in a manner set forth as claimed.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-2, 11-13, 22-24, 27, 29 and 31-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Klink (Pub. No.: US 2003/0063561) (hereinafter "Klink").

Regarding **claim 1**, in accordance with Klink reference entirety, Klink discloses a method for implementing protection switching for a virtual private network (*VPN is inherent in MPLS network of Fig. 2*) comprising the steps of:

Art Unit: 2666

establishing a working virtual private network path (Fig. 2; WE) and a protection virtual private network path (PE) between a first edge node (W) and a second edge node (E); and

switching traffic (SN) from the working virtual private network path (WE) to the protection virtual private network path (PE) when detected traffic congestion (failure) in the working virtual private network path exceeds a predetermined threshold (SIGNAL DEGRADE) (*pages 1-2, paragraph [0015]*).

Regarding **claim 2**, in addition to features recited in base claim 1 (see rationales discussed above), Klink further discloses detecting failure of the working virtual private network path; and switching traffic from the working virtual private network path to the protection virtual private network path when failure of the working virtual private network path is detected (*page 2, paragraph 0015 and thereafter*).

Regarding **claim 12**, in accordance with Klink reference entirety, Klink shows an apparatus for protection switching of a virtual private network (VPN is inherent in MPLS network of Fig. 2) comprising:

a working virtual private network path (WE) connected between a first edge node (W) and a second edge node (E);

a protection virtual private network path (PE) connected between the first edge node (W) and the second edge node (E);

a congestion detector (*not shown; inherent as disclosed at page 2, left column, first paragraph pertaining total failure*); and

a data switch (SN), wherein when data (WT) is transmitted across the working virtual private network path (WE), said congestion detector is configured to detect traffic congestion on said working virtual private network path and said data switch switches said data from said working virtual private network path to said protection virtual private network path when said traffic congestion exceeds a predetermined threshold (SIGNAL DEGRADE) (*page 2, left column, first paragraph and thereafter*).

Regarding **claim 11**, in addition to features recited in base claim 1 (see rationales discussed above), Klink further shows a plurality of quality of service parameters (Fig. 3; priorities associated with Request) assigned to said working virtual private network path and said protection virtual private network path (page 2, paragraph [0018]. Klink further states protection switching requests are prioritized to give preferential treatment of a request. As the result, the W and E label switch routers are inherently synchronized).

Regarding **claim 13**, in addition to features recited in base claim 12 (see rationales discussed above), Klink further shows a failure detector (UE), wherein said failure detector detects failure of said working virtual private network path and said data switch switches said data from said working virtual private network path to said protection virtual private network path when said failure is detected by said failure detector (page 2, left column, first paragraph).

Regarding **claim 22**, in addition to features recited in base claim 12 (see rationales discussed above), Klink further shows a plurality of quality of

Art Unit: 2666

service parameters (Fig. 3; priorities) assigned to said working virtual private network path and said protection virtual private network path (*priorities assigned to protection switching requests are discussed in page 2, paragraph [0018] in reference to Fig. 3*).

Regarding **claim 23**, in addition to features recited in base claim 22 (see rationales discussed above), Klink further shows wherein said first edge node and said second edge node are synchronized according to said plurality of quality of service parameters (page 2, paragraph [0018]. Klink further states protection switching requests are prioritized to give preferential treatment of a request. As the result, the W and E label switch routers are inherently synchronized).

Regarding **claim 24**, in accordance with Klink reference entirety, Klink discloses an apparatus (Fig. 2) to implement switching between a working virtual private network path (WE) and a protection virtual private network path (PE) between a virtual private network (VPN is inherent in MPLS network of Fig. 2), comprising:

a monitor module (UE) configured to monitor the working virtual private network path (WE) to monitor traffic flow thereon, the monitor module configured to cause a switch (SN) in traffic from the working virtual private network path (WE) to the protection virtual private network path (PE) in response to a detected event (SIGNAL DEGRADE) selected from a group of events comprising congestion in the working virtual private network path that exceeds a predetermined threshold and link failure in the working virtual private network path (*page 2, left column, first paragraph, Klink discloses monitoring device UE monitors, detects and causes the switch SN to switch from WE to PE in an event of a total failure*).

Regarding **claim 27**, in addition to features recited in base claim 24 (see rationales discussed above), Klink further discloses the monitor module (UE) being integrated into label switch router (W or E) (see Fig. 2).

Regarding **claim 29**, in accordance with Klink reference entirety, Klink discloses a virtual private network (VPN is inherent in MPLS network of Fig. 2), comprising:

a label switch router (W or E) configured for communication over a communication network, the router/switch being configured to established a working virtual private network path (WE) and a protection virtual private network path (PE) over the communication network (see Fig. 2 for connection detail);

a monitor module (UE) configured to monitor the working virtual private network path (WE) to monitor traffic flow thereon, the monitor module configured to cause a switch (SN) in traffic from the working virtual private network path (WE) to the protection virtual private network path (PE) in response to a detected event (SIGNAL DEGRADE) selected from a group of events comprising congestion in the working virtual private network path that exceeds a predetermined threshold and link failure in the working virtual private network path (*page 2, left column, first paragraph, Klink discloses monitoring device UE monitors, detects and causes the switch SN to switch from WE to PE in an event of a total failure*).

Regarding **claim 31**, in addition to features recited in base claim 29 (see rationales discussed above), Klink further discloses the monitor module (UE) being integrated into label switch router (W or E) (see Fig. 2).

Regarding **claim 32**, in addition to features recited in base claim 29 (see rationales discussed above), Klink further discloses wherein the monitor module (UE) is configured to operate independently from the label switch router (W or E) (Fig. 2 and pages 1-2, paragraphs [0015]-[0017], Klink shows UE are arranged at both ends of the working (WE) and protection link (PE). Thus, UE operates independently from the label switch router (W or E). Moreover, on page 2, paragraph [0023], Klink clearly states "each MPLS connection is monitored and protection-switched individually".

#### ***Allowable Subject Matter***

7. Claims 3-10, 13-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record, considered individually or in combination, fails to show or suggest the claimed invention of base claims 1 and 12 and further limit with novel and unobvious limitations of switching from the protection virtual private network path to the working virtual private network path should the failure is fixed as recited in claims 3-7 and 14-18; and sending time stamps in a manner as recited in claims 8-10 and 19-21.

#### ***Response to Arguments***

8. Applicant's arguments with respect to rejected claims have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Anderson et al (USP 6,535,481).

Mo et al (USP 6,775,229).

Yamano (USP 6,636,516).

Klink (USP 6,236,640).

Rosen et al, BGP/MPLS VPNs, RFC 2547, pages 1-25, 1999.

Casey et al, IP VPN Realization using MPLS Tunnels, Internet Draft, pages 1-18, 1998.

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
